Exam : **ATA02**

Title : Designing a Blue Prism
(Version 6.0) Environment

Vendor : Blue Prism

Version : DEMO

NO.1 What factors should be considered, when designing the virtualization strategy for a Blue Prism environment?

(Select 1)

- A. Availability
- B. All of the above
- C. Desktop and Application Virtualization Strategies
- D. Existing Data Center and Virtualization strategies
- E. Support of the components

Answer: B

NO.2 What devices may a Runtime Resource receive INSTRUCTIONAL communications from? (Select 4)

- A. Blue Prism Application Server(s)
- B. Blue Prism Credential Manager
- C. Third party systems accessing Blue Prism web services
- D. Other Blue Prism Runtime Resources
- E. Blue Prism Interactive Clients

Answer: A,B,C,D

NO.3 What is the difference between a Runtime Resource and a Process? (Select 1)

- A. A Runtime Resource represents a collection of Processes which is used as part of Release Management
- B. A Process represents a definition of the automation steps and logic; Runtime Resources execute the steps defined within a Process
- C. A Process represents a definition of the automation steps and logic; and a Runtime Resource is an executable containing all of the logic within a single process.
- D. There is no difference, the terms are synonymous

Answer: C

NO.4 Which of the following statements is true, when considering Virtualizing the Blue Prism Database Server?

(Select 1)

- A. The Database server should never be virtualized
- B. Virtualization of the database server should only be considered after fully reviewing the specific vendor recommendations for the Hypervisor and SQL server version
- C. Virtualization is only supported on Vmware Hypervisor technology
- D. Virtualization should be considered only in very small environments

Answer: B

NO.5 What security is applied to data that is encrypted by Credential Manager when stored? (Select 1)

- A. The credentials are managed by the Windows Credential store and the security applied is proprietary to Microsoft

B. The credentials are encrypted by the Application Server for storage in the database using either 3DES or AES-256 and a secure key hardcoded within the application

C. Credential Management is handled using session variables and security is applied based on the process logic that is defined.

D. The credentials are encrypted by the Application Server for storage in the database using either 3DES or AES-256 and a user generated key

Answer: D
