Highly Efficiently Exam Tool and Effective Exam Practice Materials

**Exam** : **C2010-653**

**Title** : Fundamentals of IBM TRIRIGA  
Application Platform V3.2.1  
Application Development

**Vendor** : IBM

**Version** : DEMO

**NO.1** Which field type can be used as a Locator field?

- A. Date
- B. Number
- C. Text
- D. Classification

**Answer:** C

**NO.2** A customer has complained that an error message is showing up after they close and reopen the form. It is discovered that a synchronous workflow controls the error message process. What should be changed so that the error message displays while the form is open?

- A. Change the synchronous workflow to an asynchronous workflow.
- B. Change the synchronous workflow to trigger from a state action.
- C. Change the synchronous workflow to use permanent data.
- D. Change the synchronous workflow to use temporary data.

**Answer:** D

**NO.3** A text field on a form cannot display all of the characters in its value in a single line. How can the visible portion of the field be enlarged on the form?

- A. Adjust the column and/or row span settings for this field in Form Builder
- B. Adjust the minimum size setting for this field in Form Builder
- C. Adjust the result column setting for this field in Data Modeler
- D. Adjust the size value for this field in Data Modeler

**Answer:** A

**NO.4** A developer has been tasked to create a method to push a record from the null state to the triActive state without having the action available on a form. What should be done to implement this design?

- A. Create a state transition from null to tri Draft, another from tri Draft to triActive in Form Builder, and keep Secondary Action checked in the state transition properties.
- B. Create a state transition from null to triActive in Data Modeler and keep Default Display unchecked in the state transition properties.
- C. Create a state transition from null to triActive in Form Builder and keep Visible unchecked in the state transition properties.
- D. Create a state transition from null to tri Draft, another from tri Draft to triActive in Data Modeler, and keep Secondary Action checked in the state transition properties.

**Answer:** B

**NO.5** Which workflow type gets executed by an association of two objects?

- A. synchronous workflow using temporary data
- B. asynchronous workflow using temporary data
- C. synchronous workflow using permanent data
- D. asynchronous workflow using permanent data

**Answer:** D

**NO.6** A change is made in a state transition configuration in Data Modeler but it has not carried over correctly at runtime. Why?

- A. The developer did not publish the form of the base business object (BO).
- B. The developer did not make the change in the base BO in Data Modeler.
- C. The developer did not import the state transition in Data Modeler.
- D. The developer did not click Apply in the state transition properties.

**Answer:** D

**NO.7** The requirement for a state transition is to automatically close the record window when the transition occurs at runtime. How can this functionality be implemented?

- A. Configure the Close Window setting for the target state properties in Form Builder
- B. Configure the Close Window setting in the sub action properties
- C. Configure the Close Window setting in the state transition properties
- D. Configure the Close Window setting in the properties for this action in Form Builder

**Answer:** C

**NO.8** What type of workflow can be called from an onChange event?

- A. Subflow workflow
- B. Asynchronous workflow
- C. Scheduled event workflow
- D. Synchronous workflow

**Answer:** D

**NO.9** What action is required to roll the server.log file?

- A. Stop and start any agent in the Agent Manager
- B. Click Roll All Logs in the System Manager
- C. Click the Roll Log Image/Link next to the appropriate category in Error Logging
- D. Restart the system

**Answer:** C

**NO.10** Query sections are preferred over multi-record smart sections except for what instance?

- A. When the developer wants the user to be able to filter the data at runtime.
- B. When the developer wants the records displayed in a vertical format.
- C. When there are a lot of records so the query section performance suffers.
- D. When the developer wants to sort the records by clicking on a column header.

**Answer:** B
